

tion of an opinion will be rejected automatically. It is a science-centric feature indicating that although biases may affect this process, overall, the errors and intentions in interpretations will be reduced, thus, science corrects both opinions and itself.

Ethical Considerations

Compliance with ethical guidelines

There were no ethical considerations to be considered in this research.

Funding

This research did not receive any grant from funding agencies in the public, commercial, or non-profit sectors.

Conflict of interest

The authors declared no conflict of interest.
